

Sample Wallet Activity Review Pack

Prepared by TxDocket

Demo wallet review for illustrative purposes only

Review period	1 April 2026 to 30 April 2026
Chain	Ethereum / Base / BNB Chain
Wallet type	Demo treasury wallet
Prepared for	Sample Client
Prepared by	TxDocket

Contents

This contents page is formatted for the sample report and aligns with the current document structure.

Section	Page
1. Executive Summary	3
2. Wallet Overview	3
3. Stablecoin Flow Summary	4
4. Transaction Review Table	4
5. Counterparty Classification	5
6. Risk Flag Checklist	6
7. Reviewer Questions	7
8. Conclusion	7
9. Disclaimer	7
Document Control	
This sample report is for demonstration only. For real wallet reviews, the final page count may vary depending on the number of transactions and supporting sections included.	

1. Executive Summary

This sample report reviews the activity of a demo crypto wallet over a selected review period. The purpose of this review is to translate onchain wallet activity into a clear operational summary suitable for finance, compliance, accounting, or internal management review.

During the review period, the wallet showed stablecoin inflows and outflows, interactions with known exchange-linked wallets, transfers to unknown counterparties, and limited smart contract activity. No conclusion is made on the legality, tax treatment, or regulatory status of the transactions. This report is intended to support human review by presenting wallet activity in a structured format.

Key observations:

- The wallet received multiple stablecoin inflows during the review period.
- The wallet made several outgoing transfers to external wallets.
- Some counterparties were identifiable based on public labels or transaction patterns.
- Some counterparties remained unknown and should be reviewed by the wallet owner.
- No custody, investment, legal, tax, or regulated AML conclusion is provided.

2. Wallet Overview

Field	Details
Wallet Address	0xDEMO...1234
Chain Reviewed	Ethereum / Base / BNB Chain
Review Period	1 April 2026 to 30 April 2026
Wallet Type	Demo treasury wallet
Main Assets Reviewed	USDC, USDT, ETH/BNB/MATIC for gas
Review Purpose	Operational wallet activity summary
Report Type	Sample wallet activity review
Prepared By	TxDocket

3. Stablecoin Flow Summary

Category	Count	Estimated Value	Notes
Stablecoin Inflows	5	US\$12,500	Mainly USDC received from external wallets
Stablecoin Outflows	3	US\$7,200	Payments sent to counterparties
Net Stablecoin Movement	—	+US\$5,300	Positive net inflow during review period
Gas Transactions	8	Low	Native token used for transaction fees
Smart Contract Interactions	2	N/A	Limited interaction with DeFi or bridge contracts

4. Transaction Review Table

The table below summarises selected demo transactions from the reviewed wallet activity.

Date	Direction	Asset	Amount	Counterparty Type	Transaction Type	Notes
2 Apr 2026	Inflow	USDC	2,500	Exchange-linked wallet	Receipt	Possible client or treasury funding
5 Apr 2026	Inflow	USDC	3,000	Unknown wallet	Receipt	Counterparty requires confirmation
8 Apr 2026	Outflow	USDC	1,200	Unknown wallet	Payment	Purpose should be documented
12 Apr 2026	Inflow	USDT	2,000	Business wallet	Receipt	Possible operating inflow
16 Apr 2026	Outflow	USDC	4,000	Exchange-linked wallet	Transfer	Possible liquidation or treasury movement
20 Apr 2026	Inflow	USDC	5,000	Known exchange	Receipt	Source appears exchange-related
24 Apr 2026	Outflow	USDT	2,000	Unknown wallet	Payment	Counterparty confirmation required
28 Apr 2026	Contract	ETH/BNB	Gas only	Smart contract	Interaction	Contract purpose should be reviewed

5. Counterparty Classification

Counterparty classification is based on available public information and/or information provided by the wallet owner. Unlabelled or unclear counterparties should be confirmed by the client.

Counterparty Type	Meaning	Suggested Follow-Up
Known Exchange	Wallet appears linked to a known exchange or exchange deposit/withdrawal flow	Confirm exchange account owner and transaction purpose
Unknown Wallet	No clear public label or business context identified	Ask wallet owner to provide counterparty name and purpose
Business Wallet	Wallet may be linked to a known business or recurring payment relationship	Confirm invoice, agreement, or supporting document
Smart Contract	Wallet interacted with a contract rather than a simple wallet transfer	Review contract purpose and transaction risk
Bridge Contract	Wallet used a cross-chain bridge	Confirm reason for bridging and destination chain
Stablecoin Contract	Interaction related to stablecoin transfer mechanics	Usually expected for token transfers

6. Risk Flag Checklist

The checklist below is intended to guide human review. It does not replace specialist blockchain analytics, legal, tax, sanctions, or regulated AML screening.

Risk Area	Status	Reviewer Notes
Large unexplained inflows	Noted	Several inflows require business explanation
Unknown counterparties	Noted	Two outgoing transfers require counterparty confirmation
Mixer exposure	Not reviewed in demo	Requires specialist screening tool
Sanctions exposure	Not reviewed in demo	Requires specialist screening tool
Bridge activity	Limited	One smart contract interaction should be reviewed
High-frequency activity	Not observed	Activity level appears moderate in sample
Stablecoin concentration	Observed	Wallet activity mainly stablecoin-based
Supporting documents	Required	Invoices, agreements, or internal notes should be attached
Human review required	Yes	Report is a support document, not a final compliance conclusion

7. Reviewer Questions

The wallet owner or operations team should answer the following:

1. What is the business purpose of this wallet?
2. Who controls the wallet?
3. Are the stablecoin inflows linked to customers, investors, counterparties, or treasury funding?
4. What is the purpose of each outgoing transfer?
5. Are there invoices, agreements, or internal approvals supporting the transactions?
6. Are any counterparties related parties?
7. Were any transactions linked to DeFi, bridging, staking, swaps, or protocol interactions?
8. Were any funds received from or sent to high-risk counterparties?
9. Has the wallet been screened using a specialist blockchain analytics provider?
10. Should this wallet be monitored on an ongoing basis?

8. Conclusion

This sample review demonstrates how TxDocket converts wallet activity into a structured operating record. The report does not replace legal, tax, regulatory, or specialist blockchain analytics advice. Instead, it provides a practical review format that helps finance, compliance, accounting, and operations teams understand what happened in a wallet and what follow-up questions should be asked.

For real wallet reviews, the quality of the final output depends on the available transaction data, public labels, wallet owner explanations, and supporting documents provided by the client.

9. Disclaimer

This report is provided for operational and informational purposes only. It does not constitute legal advice, tax advice, investment advice, financial advice, regulated AML screening, sanctions screening, blockchain forensic analysis, custody, brokerage, exchange services, or compliance certification. All findings should be independently reviewed by the client's legal, compliance, tax, finance, or professional advisers where applicable.
